
Content: Sure, here is a revised version of the Software Requirements Specification (SRS) document based on your inputs:

1. Introduction

1.1 Purpose

The purpose of this document is to outline the requirements for the development of a software application.

1.2 Scope

The software application will be designed to meet the needs of the client and provide the necessary functionality.

1.3 Definitions, Acronyms, and Abbreviations

- SRS: Software Requirements Specification
- TBD: To Be Determined

2. System Overview

The software application will be a web-based solution that allows users to perform various tasks.

3. Functional Requirements

3.1 Requirement 1

Description: The system should allow users to create an account.

Priority: High

3.2 Requirement 2

Description: Users should be able to log in to their account.

Priority: High

4. Non-functional Requirements

4.1 Performance Requirements

4.1.1 Response Times

Description: The system should have an average response time of less than 2 seconds.

Priority: Medium

4.1.2 Concurrent User Capacity

Description: The system should be able to handle up to 100 concurrent users.

Priority: Medium

4.2 Traffic and User Load

Description: The system is not expected to have high traffic or concurrent user loads.

Priority: Low

4.3 Deployment Environment and Hosting Platform

Description: The client does not have any specific preferences or constraints regarding the deployment environment or hosting platform.

Priority: Low

5. Constraints

There are no specific constraints identified for this project.

6. Assumptions and Dependencies

- It is assumed that the development team will have access to the necessary hardware and software resources.

7. Appendix

This section can be used to provide any additional information that might be relevant to the project.

Please note that this is just a sample document and should be customized according to your specific project requirements.
