Content: To create a Software Requirements Specification (SRS) document, you need to gather all the necessary information from the client or stakeholders. Here is a template to help you get started:

1. Introduction
- Provide a brief overview of the application and its purpose.
- Include any background information or context.

2. Technology Preferences
- Specify if there are any specific technologies or frameworks that should be used in the development process.

3. Goals and Objectives
- Clearly define the main goals and objectives of the application.
- This section should outline what the application aims to achieve.

4. Target Users
- Identify who will be using the application.
- Describe their characteristics, needs, and expectations.

5. Core Features and Functionalities
- List all the essential features and functionalities that must be included in the application.
- Each feature should be described briefly but with enough detail for understanding.

6. Workflows and Processes
- Document any specific workflows or processes that need to be implemented within the application.
